

## Jet Auto Air Vent with Check Valve

**Product codes - N11359 and N11360**

The Jet Automatic Air Vent (AAV) has been designed for use in sealed heating systems to continually remove air during the initial filling and subsequent operation of the system. As water circulates around a sealed heating system, it begins to evaporate and separate after a period of time. If the air is left within the system, this can cause phenomena such as noisy pipework, cold spots at the top of radiators and an overall decrease in system efficiency. Jet's Automatic Air Vent eliminates these problems by allowing trapped air to escape the system without the need for constant manual venting of radiators.

This particular range of Jet Automatic Air Vent features an innovative vacuum break at the base of the valve to prevent an air lock forming and to encourage air to be released. These AAVs also benefit from being supplied with a check valve; enabling the AAV to be removed from the system without the need for time consuming drain downtime - making it the perfect choice for professional installations.

Product No.	Connection	Dimensions (mm)				Working pressure/temperature	
		A	B	C	D	Max Pressure (Static)	Max Working Water Temperature
<b>N11359</b>	3/8" x 1/2"	90	75	9	26.5	8 Bar	110°C
<b>N11360</b>	3/8" x 3/8"	90	75	9	26.5	8 Bar	110°C

### Key features:

- Automatically discharges air build up in sealed systems
- Solid Brass Construction
- Innovative vacuum break to prevent air locks
- Supplied with a check valve for quick and easy servicing
- Optimises system efficiency and reduces radiator cold spots and noisy pipework
- Decreases the need for manual air bleeding
- Reduces system corrosion & unnecessary wear on system components
