

Jet Auto Air Vent 15mm Compression

Product code - N11361

The Jet Automatic Air Vent (AAV) has been designed for use in sealed heating systems to continually remove air during the initial filling and subsequent operation of the system. As water circulates around a sealed heating system, it begins to evaporate and separate after a period of time. If the air is left within the system, this can cause phenomena such as noisy pipework, cold spots at the top of radiators and an overall decrease in system efficiency. Jet's Automatic Air Vent eliminates these problems by allowing trapped air to escape the system without the need for constant manual venting of radiators.

This particular Jet Automatic Air Vent features a 15mm compression connection; making it incredibly simple to fit onto a vast array of heating systems.

Product No.	Connection	Dimensions (mm)				Working pressure/temperature	
		A	B	C	D	Max Pressure (Static)	Max Working Water Temperature
N11361	15mm compression	20.6	68	88.6	40.4	10 bar	115°C

Technical features:

- Automatically discharges air build up in sealed systems
- Solid brass construction
- Optimises system efficiency and reduces radiator cold spots and noisy pipework
- Decreases the need for manual air bleeding
- Reduces system corrosion and unnecessary wear on system components
