Water Softeners (Electric)

The Ultimate Range

Over 60% of households in the UK suffer the effects of hard water and yet by the simple addition of a water softener, they would enjoy the many benefits that soft water brings.

An Ultimate HE water softener is a compact modern appliance with an easily viewed control panel. With back lit display to the high capacity resin vessels, every Monarch softener has been built without compromise.

All our models are meter controlled that incorporate Opti-Brining® ensuring salt savings of around 56% when compared to conventional metered softeners. They also have added features like a clock and our unique Self Protect Programme (SPP). They measure the water used and regenerate to individual household requirements.

The intelligent 'SPP' chip and the clock ensures there is enough soft water available to delay the regeneration until 2am*, a time when little, if any, water is being used.

The Monarch High Efficiency (HE) softeners as with the Plumbsoft models, are suitable for all types of boilers & plumbing systems. HE models are supplied with an installation kit and flexible hoses to suit traditional plumbing systems, i.e., storage tanks in roof. However for Combination boilers or Pressurised systems we recommend the use of Maxflow hoses, as the Rapid-Fit bypass that accompanies every Monarch softener, is suitable for 15, 22 and 28mm supplies.

* Time can be changed to suit individual requirements.

7 reasons to use Monarch Ultimate...

- ✓ Freeflow valve technology
- ✓ Highest flow rate of any domestic softener (lowest pressure drop too!)
- ✓ HE technology with Opti-brining as standard – up to 56% salt savings
- ✓ Self-protect programme
- ✓ Suitable for 15, 22 and 28mm supplies
- ✓ Compact and easy to install
- ✓ 7-year parts and 2-year labour guarantee

Water Softeners (Non-Electric)

The Plumbsoft Range

A Plumbsoft non-electric water softener is a compact (from only 500mm high) modern appliance designed for people who demand the most up to date products.

All Monarch/Plumbsoft models will remove any existing scale to improve the efficiency of your hot water and heating systems, giving considerable cost savings in maintenance and service, whilst also saving up to 50% on washing detergents and soaps too. All to give a clean silky feel to your water.

Solo

B98466

Ultra

B98467

Both models have a twin cylinder operation. They use a 'duty standby' system. One cylinder is always in service and one is always on standby to provide a continuous supply of soft water exactly when you need it.

Model	Monarch Code	Connections	Family Size	Operation	Dimensions mm H x W x D	Supply
Solo	PSC026	3/4" male	1 - 8	Duplex meter standby	500 x 250 x 490	15mm with storage tanks in roof
Ultra	PSU027	3/4" male	1 - 8	Duplex meter standby	500 x 268 x 490	For both combination boilers and pressurized / unvented systems

7 reasons to use Plumbsoft...

- ✓ High Flow Rates
- ✓ High Capacity resin ensures maximum efficiency
- ✓ Non-electric duplex meter control
- ✓ Suitable for 15 and 22mm supplies
- ✓ Compact and easy to install
- ✓ Takes tablets or block salt
- ✓ 7-year parts and 2-year labour guarantee

Permanent Limescale Protection

The Scaleout XP Range

The Scaleout XP range is perfect for those who are seeking an alternative solution to hard water problems. The Monarch Scaleout XP offers extensive protection against limescale 24 hours a day, 7 days a week.

Every household in the UK has a form of stored water, be it tanks in the roof, the heat exchanger in your combi-boiler or an unvented/pressurised system. Other limescale control devices (LCDs) offer a temporary relief to the effects of hard water, lasting only a few hours.

Once water has passed through the Scaleout XP it will not revert back to scale forming water again. The Monarch Scaleout XP is the only limescale control device that gives permanent protection to your water system for both scale prevention and removal too.

SXP22

How it works

Water contains two main types of hardness ions that cause scale.

Monarch's CBT resin is the only one that treats both, the Cations and the Anions in water.

The scale causing ions (dissolved limescale) pass through a bed of food grade ceramic beads. These ceramic beads convert the ions into non-scale causing crystals that flow harmlessly through your plumbing system and end up down the drain.

The crystals in the water are both non-scale forming whilst also descaling, offering many benefits to the homeowner in its performance.

Approvals & compliances
